Two fixed tests, one each side
σ = 0.35
σ = 0.75
σ = 1.4
P(test judged longer)
ln(test / standard)
test = 500·e^{±δ}
= 332 / 752 ms
Accuracy at those tests
2-down-1-up converges
on 70.7% correct
→ σ = 0.75
P(correct)
Listener’s σ (rises with the noise level)
